A horizontal number line with arrows at both ends. Four points are marked with red dots and labeled above them: L, M, N, and O. L is at the left end of the line, M is to the right of L, N is to the right of M, and O is to the right of N. The points are evenly spaced, representing the integers 0, 1, 2, and 3 respectively.

EXAMPLE 4:

Given: $m\angle ANG = m\angle EDI$; $m\angle 1 = m\angle 3$

Prove: $m\angle 2 = m\angle 4$

Statements

Reasons

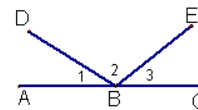

DO:

Given: $m\angle ABE = m\angle DBC$

Prove: $m\angle 1 = m\angle 3$
